## Stations can be treated for \$45 List. Surfaces treated include:

Mobile Walls - Both Sides  
Unify - worksurface

Workstations - worksurface, top rails, and  
inside of upper panels

**Swiftspace is now offering Aegis** - an enduring anti-microbial surface treatment that forms a protective durable, long lasting surface protection that prevents the growth of microbes for both hard and soft surfaces

When applied to surfaces, Aegis forms a colourless, odourless, positively charged polymer that attracts - then electrocutes, ruptures and disintegrates a microbe's negatively charged cell membrane

Tested to be effective on many surfaces including: glass, fabric, metal and more, to control and prevent microbial growth including bacteria, mold, mildew, fungi and algae

Bonds instantly and dries in 3-5 minutes on high touch, high traffic surfaces (ex. door knobs) and 2-24 hours on treated fabrics (ex. carpets)

### Cleaning:

Clean treated surfaces with soap and water or any non-caustic disinfectants. Aegis is **NOT** a disinfectant or cleaner. The anti-microbial coating is designed to support, not replace, your existing cleaning/disinfecting procedures
